INSTRUCTIONS FOR NFPA 285 COMPLIANCE

With respect to fire performance, note the following when detailing the Clip & Caulk Installation System with Back Drained & Ventilated (BD&V) Sub-Framing over gypsum (non-structural) sheathing:

1. The following document represents the referenced system as it has been designed, detailed, and tested and its relationship with a typical exterior wall assembly. As such, the document may be considered a baseline for the system and appropriately applied to project-specific conditions.
 - a. The following document includes a partial elevation that outlines the NFPA 285 Zone and related dimensions, notes, and sections. In order to maintain NFPA 285 compliance, refer to the specialized detailing required in the NFPA 285 Zone and at window heads.
2. Through the use of a specific Engineering Evaluation (EEV) available from Laminators, engineering extensions may be made (in lieu of what has been tested) with respect to base wall framing, fire-stopping at floor lines, cavity insulation, and water-resistive barrier (WRB) components while maintaining NFPA 285 compliance. The EEV may be required for submission to the Authority Having Jurisdiction (AHJ) to support the extensions.
3. If one or more engineering extensions are required beyond what is provided in the EEV available from Laminators, it is the responsibility of a third-party to pursue obtaining a separate EEV that adequately addresses each intended substitution. Note that Laminators cannot serve as the third-party in efforts to obtain such an EEV.

Note that the application of any engineering extension for NFPA 285 compliance will need to be evaluated by the Design Professional of Record (DPR) with respect to potential impact on any air, structural, and water performance of the project-specific exterior wall assembly. It is possible that components substituted to achieve fire testing compliance will affect the assembly differently with respect to air, structural, and water performance and need to be coordinated.

If the Clip & Caulk Installation System with Back Drained & Ventilated (BD&V) Sub-Framing is intended to be installed over a different substrate (e.g. Omega CI rigid insulation panels, CMU, or concrete), please defer to the appropriate detail set. For installations over fire-retardant-treated wood (FRTW) structural sheathing (panels), please defer to the Omega CI detail set.
